 Activates & pauses recording

Reduce your blind spots while capturing your journey in 1080p full high definition with the **MCPK-43DVR**. The forward facing camera records ahead of your vehicle ensuring that all details are captured using its wide 120° wide angle lens. The reverse camera is designed to reduce your blind spots when backing up, by displaying the reverse camera feed on the 4.3" display when the reverse gear is selected.

DASH CAM DVR

The in-built DVR has automatic start up and shut down capability that continuously records your journey. No more "your word vs theirs" in the case of incidents or accidents.

REVERSE MONITOR

Avoid rear collisions or even tragic accidents with a rearview camera. When reversing your mirror monitor will display gridlines to help you manoeuvre your vehicle and identify distance of objects directly behind you.

PARK MODE

Parkmode watches over your vehicle while you are parked. If an impact is detected the in-built DVR will begin recording.
